Foaming Feminine Wash

pH Balance 3.5

Safe and gentle for, everyday use

- Made from pure & natural ingredients
- Safe during pregnancy
- Free from harsh chemicals
- No parabens, No silicones,
- No sulphate, No artificial Colours

Why should Foaming Feminine Wash have pH balance 3.5

The natural pH of the intimate (vulvo-vaginal) area is slightly acidic, typically ranging from 3.5 to 4.5. Maintaining a pH balance of 3.5 in the intimate area is important for female hygiene because it helps to prevent the growth of harmful bacteria and maintain a healthy environment. When the pH balance is disrupted, it can lead to overgrowth of harmful bacteria, such as yeast and bacteria that cause bacterial vaginosis, which can result in uncomfortable symptoms like itching, burning, odor, and discharge.

- **Tea tree leaf Extract**
helps to regulate the natural flora of the genital area
- **Rosmarinus officinalis**
contains natural acids-rosmarinic acid & caffeic acid
can help balance the skin's pH
- **Witch hazel**
a natural astringent, helps to soothe and calm the skin
- **Geranium**
helps to prevent the growth of harmful bacteria
- **Green tea leaf extract**
contains a variety of bioactive compounds, like polyphenols & catechins, helps prevent infections, such as bacterial vaginosis and yeast infections
- **Lavender**
helps to alleviate any unpleasant odors
